

MONTAGE / MODX Premium Series

The MONTAGE **Premium Series** has been created based on the operating system MONTAGE OS v2.0. It offers optimized **as well as extended** versions of older EASY SOUNDS sound libraries to be used on MONTAGE.

MONTAGE OS version 2.0 was the first version featuring the ability to import MOTIF Performances and Voices in separate libraries. However, our optimized libraries of the MONTAGE **Premium Series** offer the following advantages over our Legacy Series and the direct import of MOTIF Voices and Performances by the user:

- The MOTIF Performances have been manually converted to MONTAGE / MODX Multi Part Performances with a lot of effort and the focus on every detail.
- The Multi Part Performances have been extended compared to the MOTIF versions with additional Parts. Partly also new features like FM-X and Motion Control was used which wasn't present in MOTIF series.
- Up to 8 Scenes are part of the Multi Part Performances which change the (also partly new assigned) Arpeggios.
- All mixings of the Performances have been optimized.
- All Multi Part and Single Part Performances feature a Super Knob assignment.
- The MONTAGE / MODX files contain just the Multi Part and Single Part Performances that are part of the library which keeps a more clear organization. A „just“ imported MOTIF XF file contains always all 4 User Voice banks (512 converted Performances) regardless of their usage including all Preset Drum Kits. All this MOTIF Preset content is already part of the MONTAGE / MODX Preset content. This content from mostly MOTIF XF User bank 2 - 4 leads to duplicates and makes the selection difficult using the Category Search.
- The flags (AWM2 / FM-X, MC) and the categories have been re-set accordingly which allows to use the new [CATEGORY SEARCH].
- Samples and User Waveforms have been optimized.

!! This document has been created based on MONTAGE but is now also valid for MODX.
